for Expert Examinations in Connection with Occupational Disability
Claims."

Sofia, Suvremenna Meditsina, Vol 14, No 2, 1963; pp 49-53.

Abstract [English summary modified]: Of 694 workers who had sustained
various types of eye injuries and were applying for disability benefits
or continuation thereof, examination revealed that no less than 602
either exaggerated the degree of their loss of vision, or outright
simulated it (311 exaggerators and 233 simulators.) These data are
reviewed from various aspects and discussed. Twelve brief case reports.

"Occupational Diseases of the Nervous System and Neurological
Medical Aid at Enterprises"

Sofia, Nevrologiya, Psichiatriya i Nevrokhirurgiya, Vol 5, No 1,
1966, pp 1-11

Abstract: It is brought out that the frequency and gravity of
occupational diseases of the peripheral and central nervous sys-
tem and of psychoneuroses with an occupational background in-
creased in Bulgaria during 1953-1962. This is explained by the
accelerated rate of economic development. Statistics of relative
severity and of the average number of days lost according to oc-
cupations are presented. Conditions arising as a result of ex-
posure to noise and vibrations are discussed. With respect to
neurointoxications, the increase of their incidence among agri-
cultural workers, particularly in connection with the use of
organophosphorus compounds, is pointed out. The danger presented
by radiation sickness to radiologists, engineers using X-rays in
work on metals, persons occupied at the nuclear center, etc., is
mentioned. Organization of a more effective neurological medical
service at industrial enterprises is proposed. Graphs, 58 ref-
erences (all Bulgarian). Manuscript received Sep 65.

AUTHORS: Vasilev, Khr., Obreshkova, N.

TITLE: On the problem of roasting a non-standard molybdenum concentrate in a fluidized bed

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 3, 1962, 24, abstract 30155
("Godishnik Khim.-tekhnol. in-t", 1959 (1960), v. 6, no. 1, 1 - 9,
Bulgarian; Russian and English summaries)

TEXT: The roasting of a non-standard Bulgarian Mo-concentrate in a fluidized bed was investigated in a laboratory. The effect of temperature and roasting time upon the degree and rate of roasting was studied. The optimum roasting temperature was 580°C. The roasting time varied from 3 to 30 minutes. The degree and rate of roasting in a fluidized bed are considerably higher than in a fixed layer.
